Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The notice for the proposed information collection is published to obtain comments from the public and affected agencies.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address any of the following: (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Enhance the quality, utility, and clarity of the information to be collected; (d) Minimize the burden of the collection of information on those who are to respond,

including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570 or send an email to comb@cdc.gov. Written comments and/or suggestions regarding the items contained in this notice should be directed to the Attention: CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395-5806. Written comments should be received within 30 days of this notice.

Proposed Project

The National Hospital Care Survey (NHCS) (OMB Control Number 0920-0212; Expires 04-30-2016) — Revision — National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Section 306 of the Public Health Service (PHS) Act (42 U.S.C. 242k), as amended, authorizes that the Secretary of Health and Human Services (DHHS), acting through NCHS, shall

collect statistics on the extent and nature of illness and disability of the population of the United States. This three-year clearance request for NHCS includes the collection of all impatient and ambulatory Uniform Bill-04 (UB-04) claims data or electronic health record (EHR) data from a sample of 581 hospitals as well as the collection of additional clinical data from a sample of emergency department (ED) and outpatient department (OPD) visits (including ambulatory surgeries) through the abstraction of medical records.

NHCS integrates the former National Hospital Discharge
Survey (OMB No. 0920-0212), the National Hospital Ambulatory
Medical Care Survey (NHAMCS) (OMB No. 0920-0278) and the DrugAbuse Warning Network (DAWN) (OMB No. 0930-0078, expired

12/31/2011) previously conducted by the Substance Abuse and
Mental Health Services Administration's (SAMHSA). Integration of
NHAMCS and DAWN into the NHCS is part of a broader strategy to
improve efficiency by minimizing redundancy in data collection;
broadening our capability to collect more relevant data on
transitions of care; and identifying opportunities to exploit
electronic and administrative clinical data systems to augment
primary data collection.

NHCS consists of a nationally representative sample of 581 hospitals. These hospitals are currently being recruited, and participating hospitals are submitting all of their inpatient

and ambulatory care patient data in the form of electronic UB-04 administrative claims or EHR data. Currently, hospital-level data are collected through a paper questionnaire and additional clinical data are being abstracted from a sample of visits to EDs and OPDs. This activity continues in 2014, and as more hospitals choose to send EHR data that includes clinical information, the need to conduct abstraction will be reduced.

This revision seeks approval to continue voluntary recruitment and data collection for NHCS, including inpatient, outpatient and emergency care; to revise the hospital-level questionnaire with additional items needed to improve weighting procedures; to combine the OPD and ambulatory surgery location patient record forms to more effectively capture ambulatory procedures in these settings; to continue collection of substance-involved ED visit data previously collected by DAWN; and to eliminate data collection from freestanding ambulatory surgery centers in order to concentrate efforts on hospital-based settings of care.

NHCS collects data items at the hospital, patient, inpatient discharge, and visit levels. Hospital-level data items include ownership, number of staffed beds, hospital service type, and EHR adoption. Patient-level data items are collected from both electronic data and abstraction components and include basic demographic information, personal identifiers,

name, address, social security number (if available), and medical record number (if available). Discharge-level data are collected through the UB-04 claims or EHR data and include admission and discharge dates, diagnoses, diagnostic services, and surgical and non-surgical procedures. Visit-level data are collected through either EHR data, or for those hospitals submitting UB-04 claims, through the claims as well as through abstraction of medical records for a sample of visits. These visit-level data include reason for visit, diagnosis, procedures, medications, substances involved, and patient disposition.

NHCS users include, but are not limited to, CDC,

Congressional Research Office, Office of the Assistant Secretary

for Planning and Evaluation (ASPE), National Institutes of

Health, American Health Care Association, Centers for Medicare &

Medicaid Services (CMS), SAMHSA, Bureau of the Census, Office of

National Drug Control Policy, state and local governments, and

nonprofit organizations. Other users of these data include

universities, research organizations, many in the private

sector, foundations, and a variety of users in the media.

Data collected through NHCS are essential for evaluating health status of the population, for the planning of programs and policy to improve health care delivery systems of the Nation, for studying morbidity trends, and for research

activities in the health field. Historically, data have been used extensively in the development and monitoring of goals for the Year 2000, 2010, and 2020 Healthy People Objectives.

There is no cost to respondents other than their time to participate. The total burden is 8,232 hours.

Estimated Annualized Burden Hours
